

NCST Investigation of the Champlain Towers South Collapse

Investigation Update

Glenn R. Bell

Associate Lead Investigator

Agenda

- Review investigative goals and approach
 - Failure hypotheses
 - Non-quantitative evidence
 - Collapse sequence
 - Uncertainty
- Investigation management
 - Team integration
 - Schedule, milestones, and interdependencies
 - Budget
- Invasive testing
- Development of recommendations

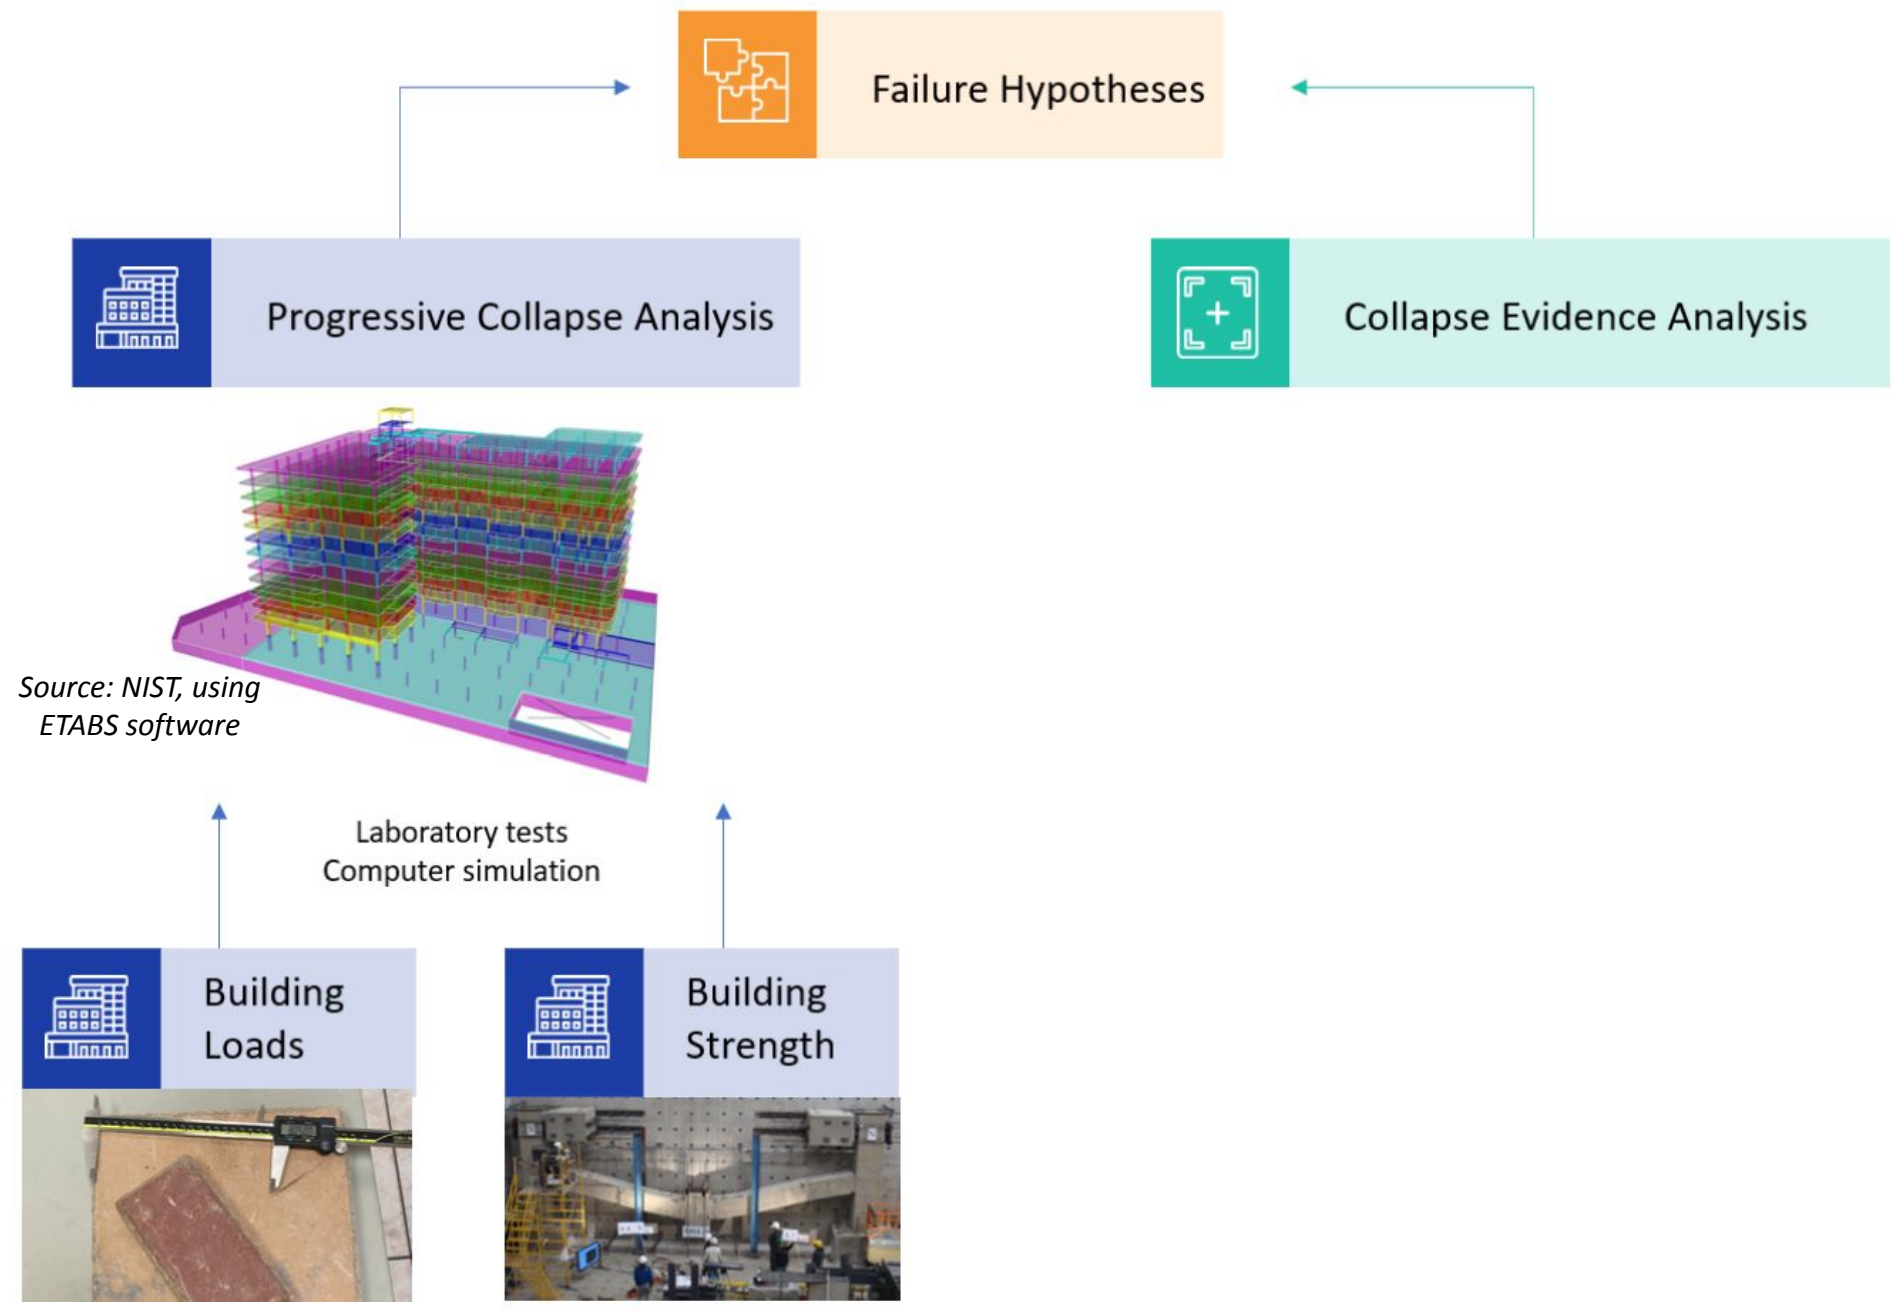

Failure Hypotheses

A failure hypothesis is an investigative supposition about where and how the failure occurred with likely contributing causes.

- Examination of failure hypotheses is a constant investigative activity
- Includes both initiation and progression of the failure
- Must find a single valid hypothesis and disprove the others
- Multiple potential causes and contributors
- Currently numerous active hypotheses
- We have ruled out nothing at this time

BUILDING PERMIT				Town of Surfside		No 18033	
OWNER OF BUILDING: <i>Surfside Property Level</i>				SURFSIDE, FLORIDA 33154			
ARCHITECT: <i>Perkins + Will</i>				BUILDING PERMIT			
CONTRACTOR OR BUILDER: <i>North Atlantic</i>				PROPOSED LOCATION			
STREET ADDRESS				LOT	BLOCK	SUBDIVISION	
<i>8777 Collins Ave (Surfside)</i>				<i>4</i>	<i>NB</i>	<i>11/12/2018</i>	
DESCRIPTION OF WORK							
<i>Refrain Addition To Building</i>				<i>*250.000 *1265.00</i>			
NO. OF BUILDINGS	NO. OF BATHS	FLOORING	SYSTEMS	MATL.	TYPE OF WORK	SCOPE	CURRIC CONTENT
This permit is hereby granted to the above Contractor or Builder to perform the above described work, as per application filed in this office. This Permit is granted upon the express condition that all facts in the application are true and that the construction complies strictly with the plans and specifications submitted, and is in accordance with the Building Laws of the State of Florida and with all Ordinances of the Town of Surfside, and rules and regulations of the Town Council of the Town of Surfside. This Permit may be revoked at any time upon the violation of said laws, ordinances or rules and regulations, or upon any change in plans and specifications submitted by the Town of Surfside.							
At Surfside, gables, drains, the hydrants, roadways and private driveway within the block in which the work is being done are to be kept open by the contractor for their intended use.							
In consideration of the issuance to me of the foregoing Building Permit, I hereby agree to do the proposed construction in strict conformity with the application and the plans and specifications thereof heretofore by me submitted, and in compliance with all provisions of all Building Laws of the State of Florida, all the Ordinances of the Town of Surfside, and all rules and regulations of the Town Council of the Town of Surfside.

Uncertainty

Activities to date

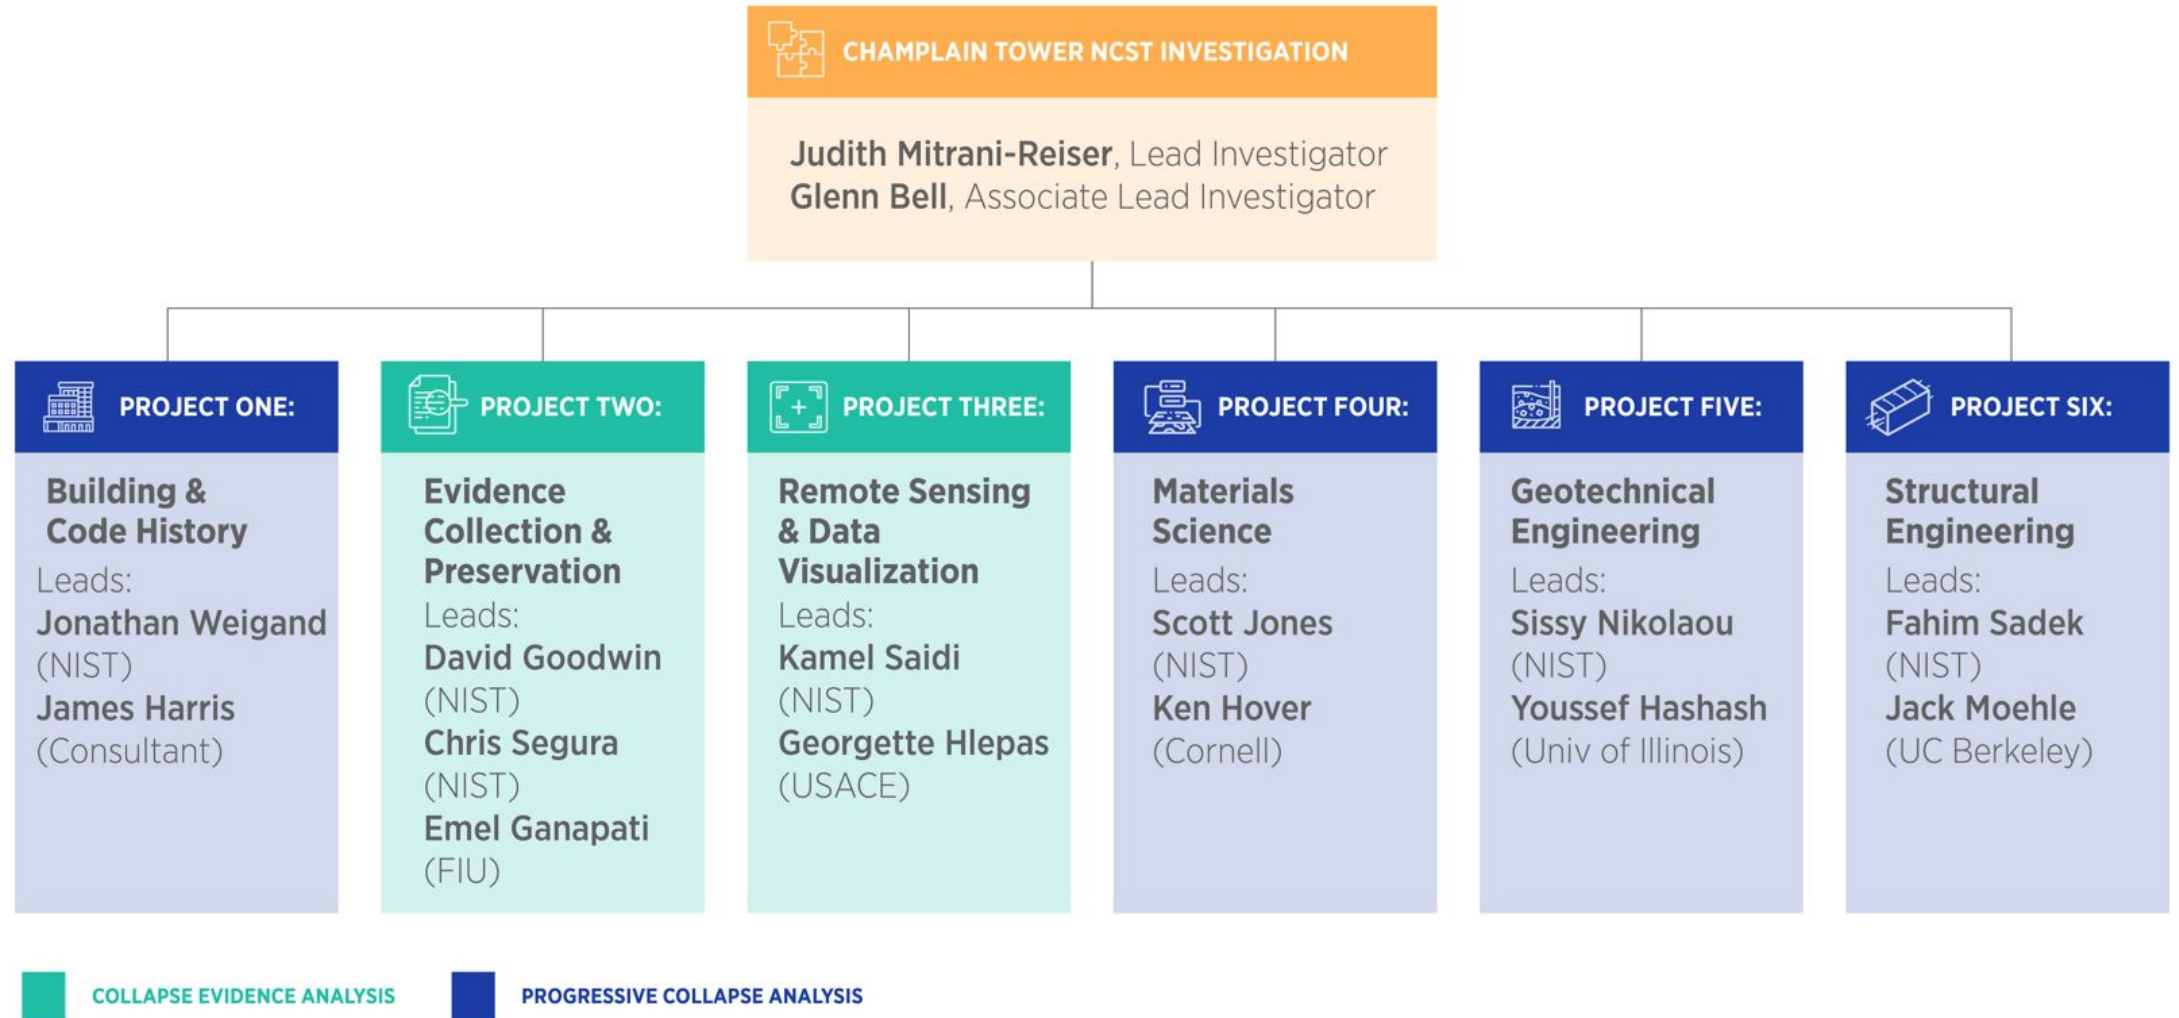

- Engaged team members with expertise in Uncertainty Quantification (UQ)
- Engaged potential contract consultants with expertise in UQ
- Engaged NIST's Statistical Engineering Division
- Conducted an extensive literature search
- Held a half-day investigation workshop on UQ in January
- Routinely consider uncertainty in our measurements
- Consider uncertainty and statistical needs in our sampling and testing plans

Challenge

- How to rigorously consider UQ in our quantitative work using models that are simple enough to be manageable

The marriage of the quantitative **Progressive Collapse Analysis** and the non-quantitative **Collapse Evidence Analysis** will be the key to managing uncertainty in this investigation.

Investigation Management – Team Integration

Continuous communication amongst teams

COLLAPSE EVIDENCE ANALYSIS PROGRESSIVE COLLAPSE ANALYSIS

Periodic meetings

- Weekly investigation leadership meetings (Judy and Glenn)
- Periodic project team meetings
- Biweekly all-team-lead project management meetings
- Biweekly all-team-members meetings

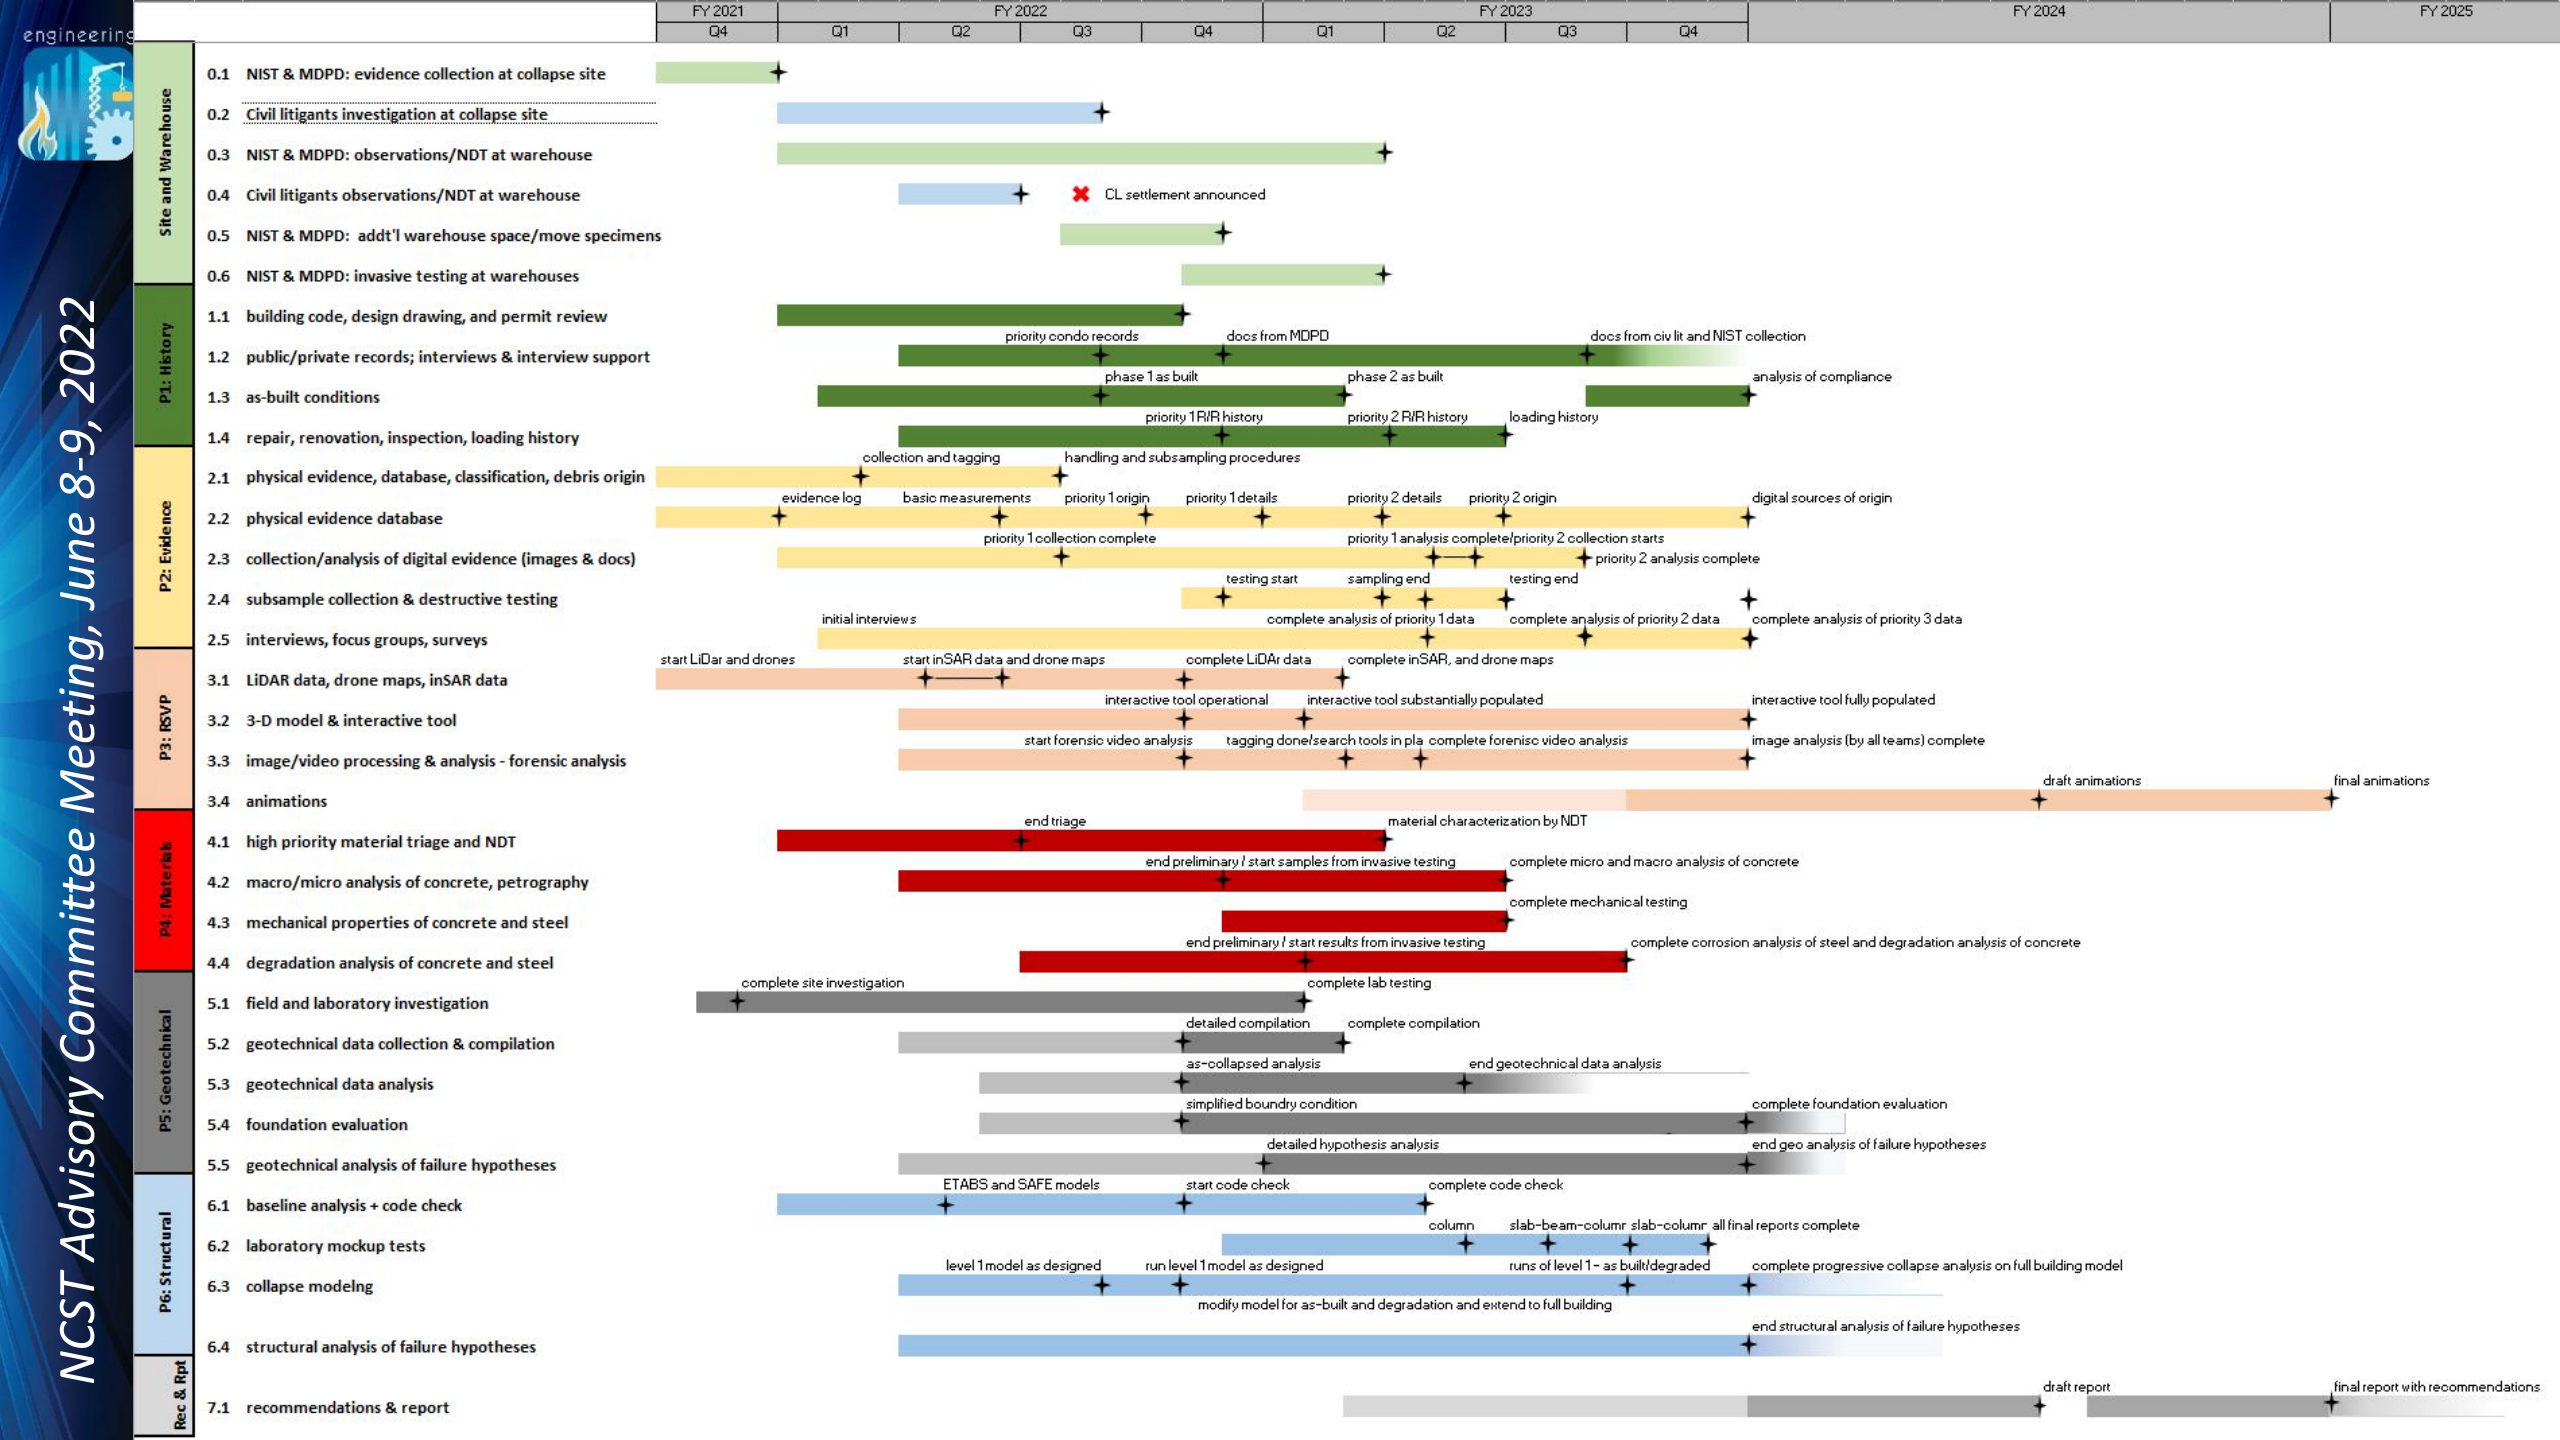

Shared databases

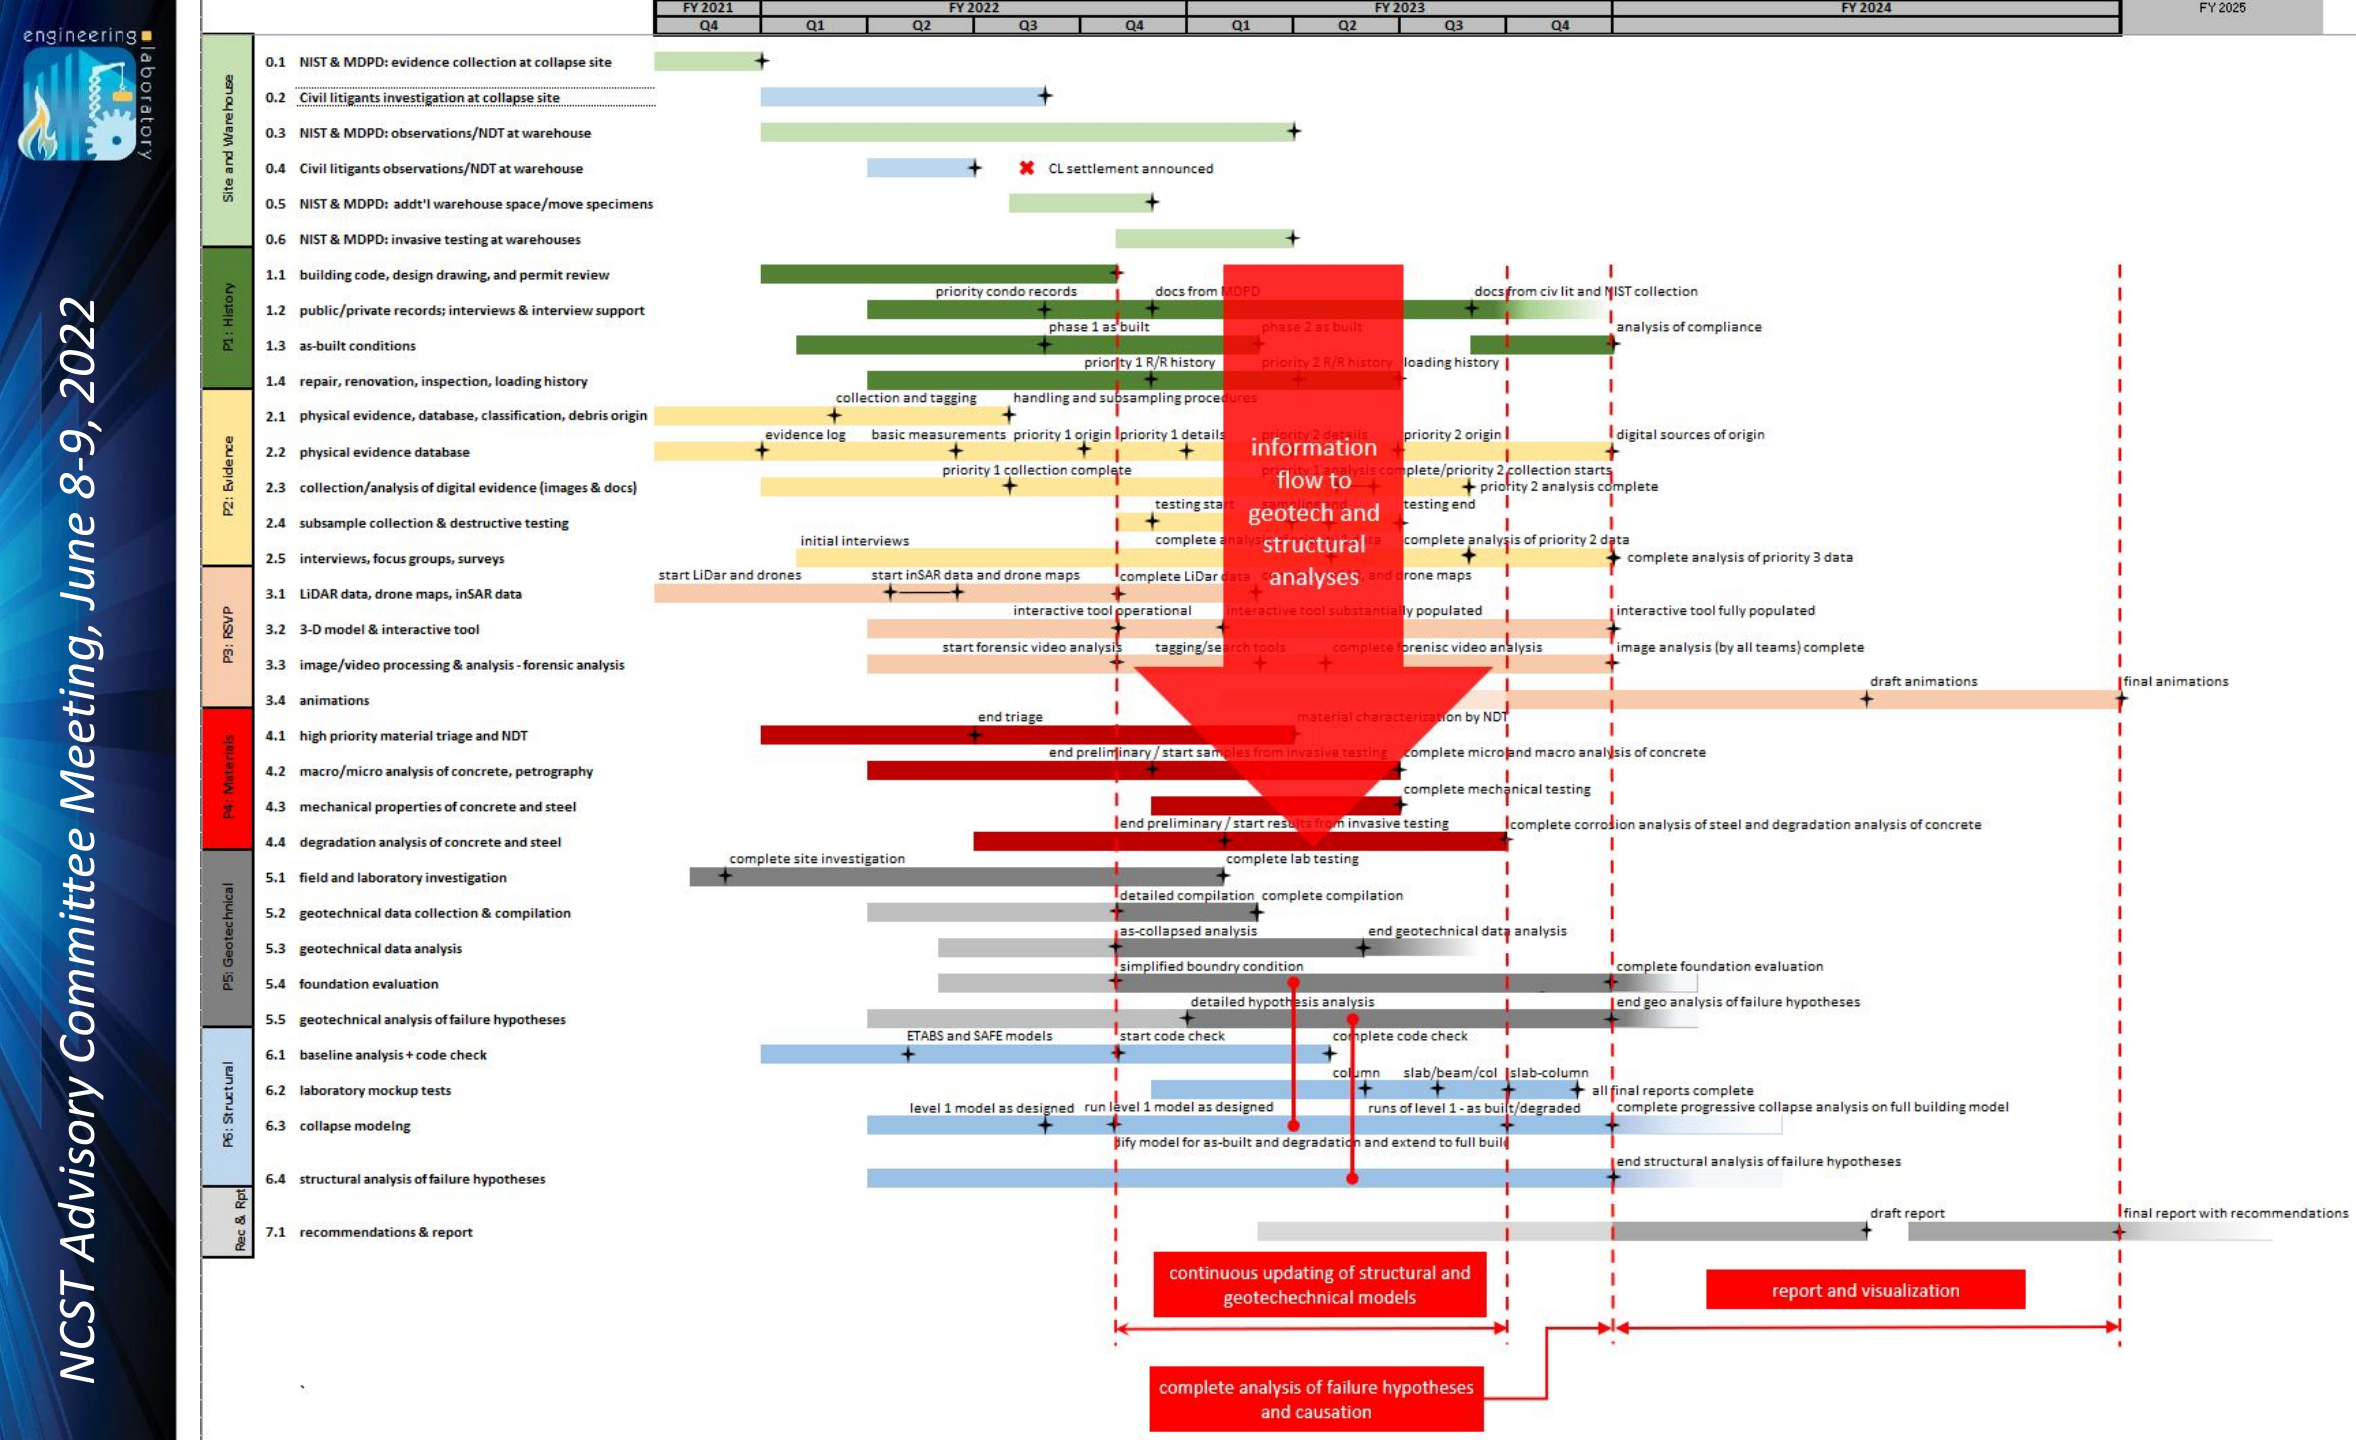

- Evidence database
- Shared internal drives
- 3-D geospatial model
- NIST library solutions

Whole-investigation tiger teams and initiatives

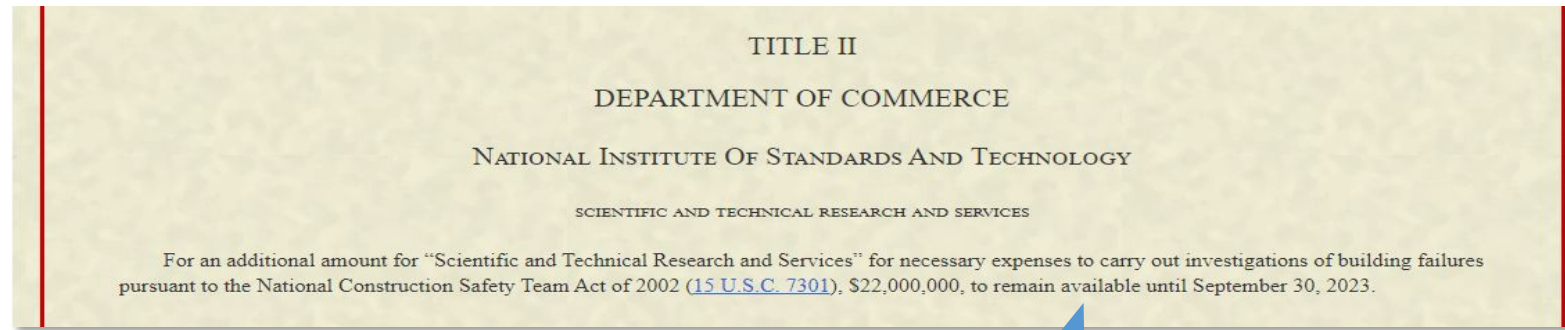

- Invasive testing
- Evidence
- Failure hypotheses
- Uncertainty quantification

Investigation Management – Budget

\$22,000,000, to remain available until September 30, 2023

NIST's budget allocation of the \$22 million

Item	Amount	Percent of \$22M
Labor	\$10M	45%
Contracts	\$8.5M	39%
Equipment	\$1.5M	7%
Travel and misc.	\$2M	9%

Invasive Testing Plan

Source: NIST

over 600 pieces of physical evidence

Considerations

- Analysis of failure hypotheses
- Input for structural tests and computer modeling
- Input for material characterization and degradation mechanisms
- Evidence database > location in structure
- Non-destructive testing
- Sampling strategies for characterization (statistics/uncertainty)

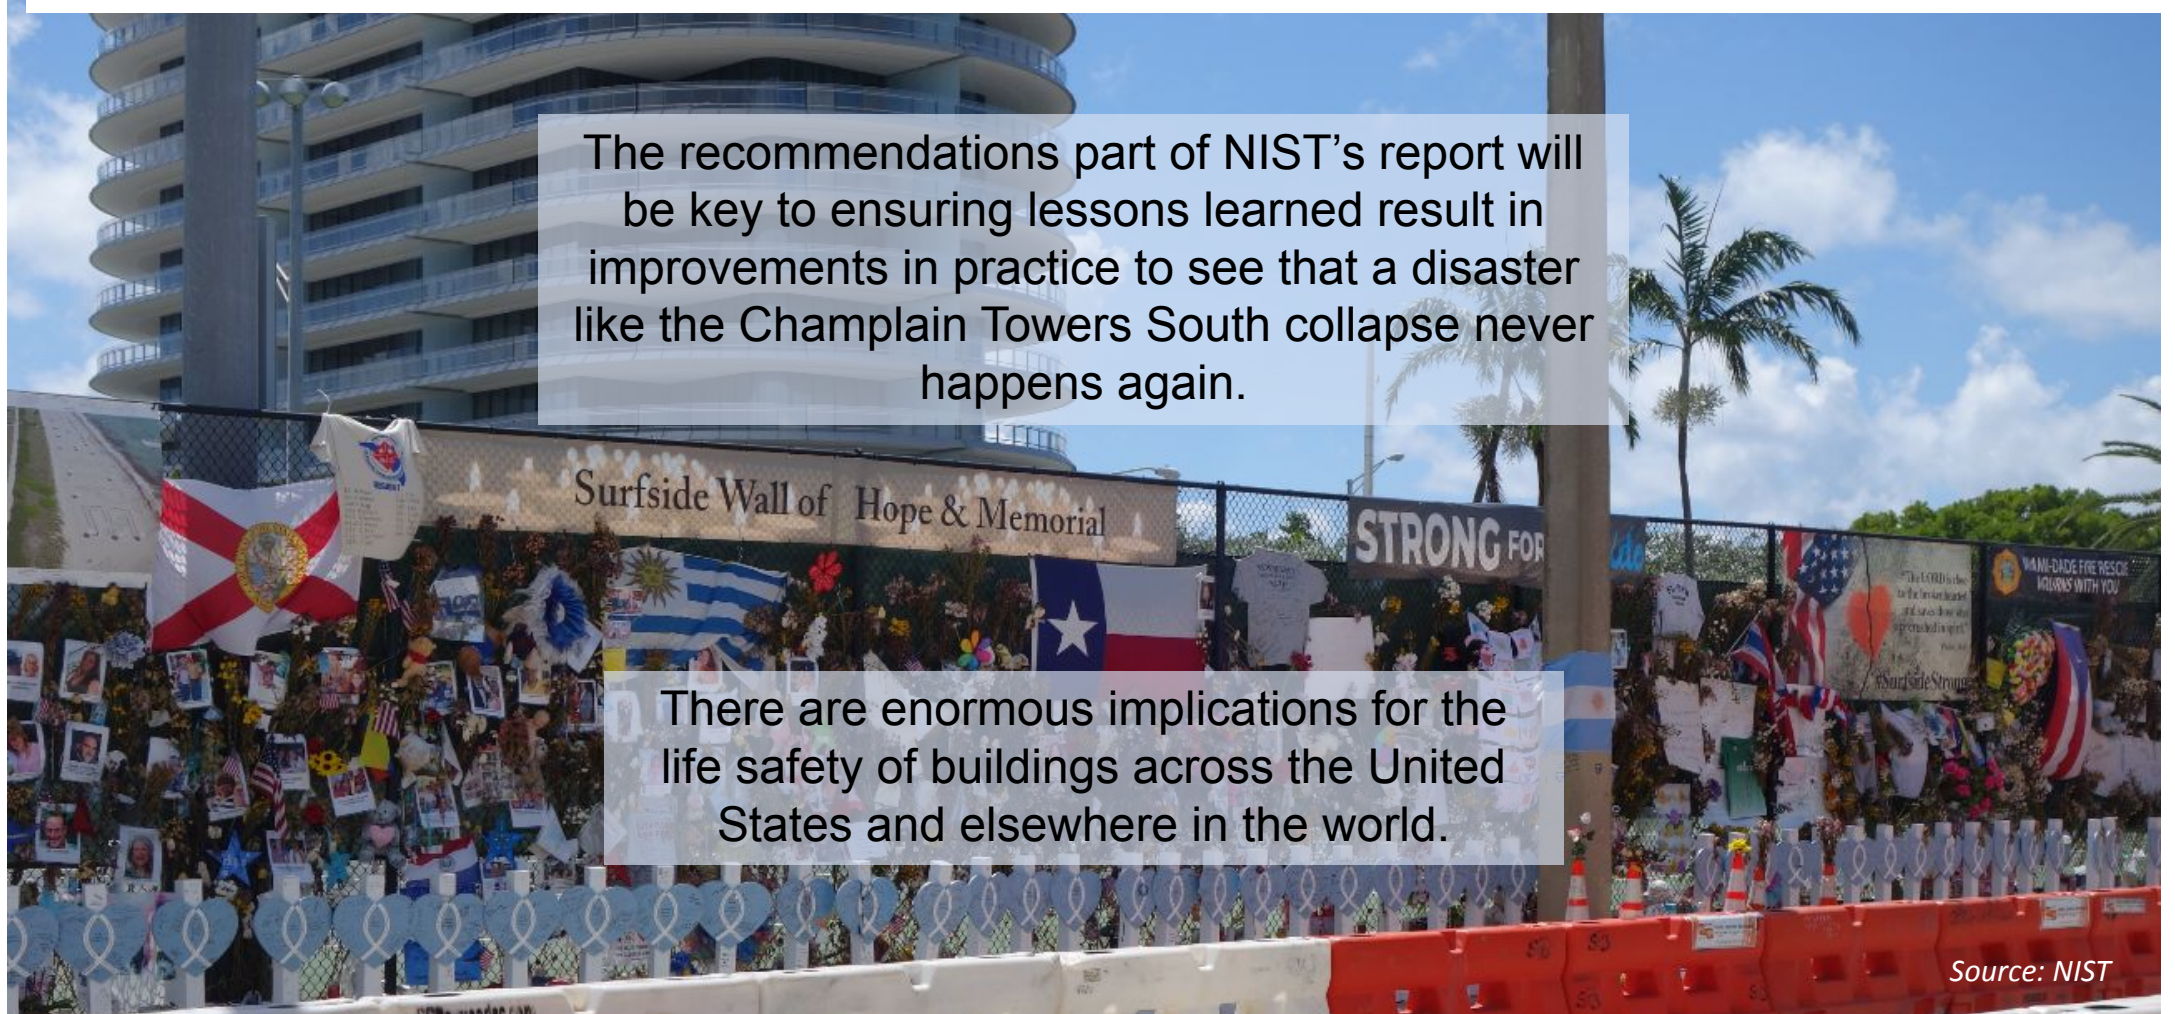

Invasive testing plan

- Extract and test several hundred concrete samples
- Extract and test approximately 200 reinforcement samples

Structural/mechanical properties

- Material/chemical properties
- Degradation mechanisms

Development of Recommendations
